Worked models for the most repeated placement patterns

Solved examples collection

These are representative worked patterns. The web application contains 20 solved examples for each of 50 topics with detailed explanations, formulas, hints, shortcuts and difficulty tags.

Percentages

Question: What is 35% of 240?

Solution: $35/100 \times 240 = 84$.

Shortcut: identify the model before calculating; check the answer against the options.

Profit & Loss

Question: An item costs ₹800 and gains 15%. Find SP.

Solution: $800 \times 1.15 = ₹920$.

Shortcut: identify the model before calculating; check the answer against the options.

Time & Work

Question: A takes 12 days and B 18 days. Together?

Solution: $\text{Rate} = 1/12 + 1/18 = 5/36$, so $\text{time} = 36/5 = 7.2$ days.

Shortcut: identify the model before calculating; check the answer against the options.

Speed & Distance

Question: A car travels 210 km in 3.5 hours.

Solution: $\text{Speed} = 210/3.5 = 60$ km/h.

Shortcut: identify the model before calculating; check the answer against the options.

Probability

Question: Two dice: probability of sum 8?

Solution: Five favourable pairs out of 36, so $5/36$.

Shortcut: identify the model before calculating; check the answer against the options.

Series

Question: Next: 2, 6, 12, 20, 30, ?

Solution: Differences 4,6,8,10; next difference 12, answer 42.

Shortcut: identify the model before calculating; check the answer against the options.
